Summary

I am a senior computer engineering student with experience in developing applications using Next.js, React, React Native, and Java Spring. I am a team-oriented individual with strong analytical thinking and problem-solving skills. I effectively utilize my mathematical analysis abilities to develop data-driven solutions in my projects. I can make quick and effective decisions in crisis situations to manage processes efficiently. I am continuously improving myself in the fields of artificial intelligence and software development.

Education

Computer Engineering

Yalova University

Yalova, Türkiye

09/2020 - Present

Computer Science

Kielce University of Technology (Erasmus Program)

Kielce, Poland

10/2023 - 03/2024

Experience

Kartezya Technology

I developed an admin panel using Next.js and React, integrating RESTful APIs for efficient data management. I documented and tested APIs using Swagger and Postman while optimizing communication with backend services to enhance system performance.

Istanbul, Türkiye

07/2023 - 09/2023

Sahibiyim.com

At sahibiyim.com, an e-commerce start-up, I managed frontend development processes. I developed and optimized user interfaces using React and Vite. To improve software quality, I wrote tests with Vitest, worked on API documentation with Swagger, and tracked tasks using Jira.

Yalova, Türkiye

10/2024 - 02/2025

Volunteering

T3 AI Volunteer

As a volunteer at T3 AI, I contributed to the AI ecosystem by staying up to date with developments in artificial intelligence and participating in technical events. I actively engaged in knowledge sharing on AI and machine learning, fostering interaction within the community. Additionally, I supported the growth of the AI ecosystem by assisting in the organization of various events.

02/2025 - Present

Yalova University AI Community – Executive Board Member

I served as an executive board member of the Artificial Intelligence Community, one of the largest student organizations at Yalova University. During this time, I organized various training sessions, seminars, trips, and events in the fields of artificial intelligence and technology, contributing to the growth of the student community. Additionally, I played an active role in planning and coordinating events, enhancing my teamwork and organizational skills.

10/2022 - 06/2023

Projects

CampusLink – Mobile Application

I developed a mobile application called CampusLink using Java Spring, React Native, PostgreSQL, and Figma. This application aims to provide a social network for university students, enabling the sharing of club events, meal menus, class schedules, and other essential information. On the backend, I built APIs using Spring Boot and managed data with PostgreSQL. I designed the mobile interface with React Native and handled UI/UX processes through Figma.

Turkish Spell Checker – C Programming

I developed a program in C that detects and corrects spelling mistakes in Turkish text. Using natural language processing techniques and algorithms, the program performs spell checking and suggests corrections.

Image to Text Converter – Java Programming

I developed a Java application that captures a screenshot and converts the text within the image into editable text. I utilized Firebase for certain processes, enabling efficient text recognition and data processing.

Skills

React, React Native, C, Java, Spring, PostgreSQL, Postman, Swagger, Expo, Jira, Javascript, OOP, Python

Languages

English
